

"Without the Sharks' the Ocean Dies"

Why Not to Buy or What to Buy

200 million sharks' killed each year!

At that rate in 10 to 12 years there will be not enough sharks' to regulate the Ocean, the next level of predators will proliferate, over-crop & then there is nothing.

You can "STOP SALES"

Advise any supermarket or restaurant that the use of sharks' is no longer sustainable and that by buying and selling shark they are killing the OCEAN. That you and your friends will not buy or frequent their premises until they: **STOP BUYING.**

This is the Reality:

Sharks can assimilate and discard mercury at will. We humans store permanently mercury in the brain. Any shark over one meter, the mercury levels are too high for human consumption. Methyl mercury levels tested on the supermarket shelves are sixty times too high for human consumption...
Leading to impotency and death!

Do you know?

- Every woman who has lipstick has shark on her lips.
- Shark in Asia is only known as fish fin.
- Cartilaginous products from sharks'.
- Gurio and health food marketed from sharks'.
- Vitamin "A" from shark's liver oil.

Shark is sold worldwide with synonyms as:
